

Beam.

The smart projector that
fits in any light socket.

beamlabsinc.com

Beam can turn any flat surface into a big screen. It is a smart projector equipped with a computer, all inside a beautifully designed casing.

Screw Beam into any light socket or use the

included power cable to place Beam on a flat surface. A separate fixture enables Beam to project on the wall, table, or on the ceiling. You can control Beam with the remote app that is available for any Apple or Android smartphone/tablet.

**Install any app available
on Beam**

so you can watch
Netflix or YouTube on a big screen
(even on your bedroom ceiling
while lying in bed). Or share your
personal pictures and videos with
your friends and family directly.
from your smartphone/tablet
through Airplay and Miracast.

**You can tell Beam
to do what you want
it to do** when something
you define happens. Like: play a
YouTube movie when someone
comes home or even wake you up
in the morning with the latest news
and your agenda for the day.

Today is
Monday
September 12
12 AM

ALL DAY
Work from home

9:30 AM
Call Eddy for interview portraits

10:30 - 11:30 AM
Skype call with Jim

Coffee with Charlene

7:30 - 8:30 AM
Gallery opening at Foam

7:40
Gym session

Beam also has a normal dimmable light! You can switch between light and projection instantly by pressing the button on Beam or by using the Beam remote app. With the app you can even dim the light levels!

Beam Fixture.

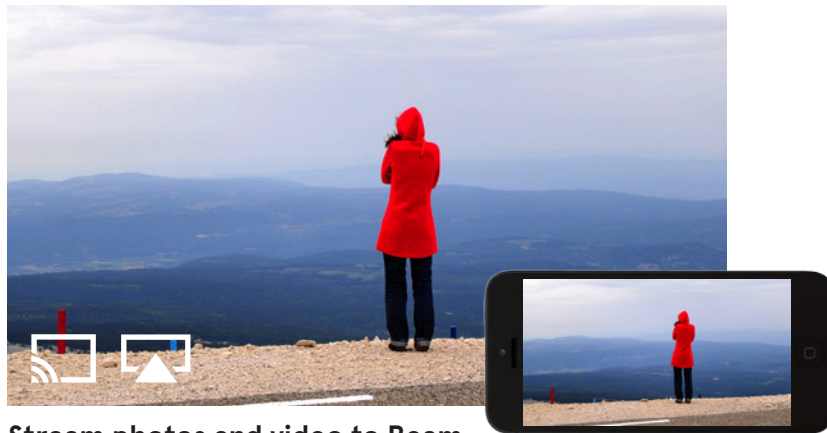

Specifically designed for Beam.
Beam Fixture rotates to more than
180° to project on floors, walls or
ceilings.

Beam. Smart + connected

Beam is a beautifully designed smart projector that seamlessly integrates with any room in your house. Use it to stream content in the kitchen, watch a movie in the bedroom, or take it with you for presentations in the office.

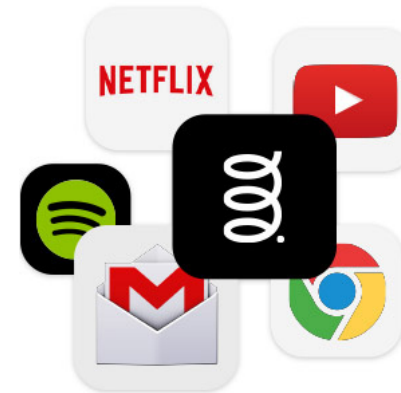

Stream photos and video to Beam

You can stream any content to Beam through Airplay or Miracast.

Control Beam with your smartphone

Beam can be controlled with your smartphone or tablet with the Beam Remote app for iOS and Android devices.

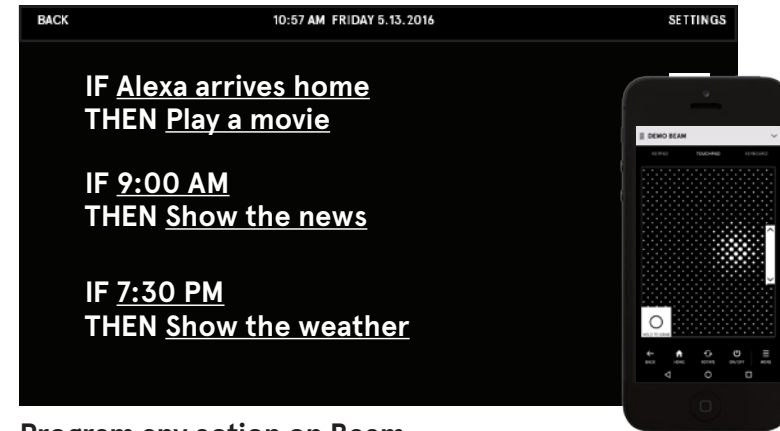

Install and run any app.

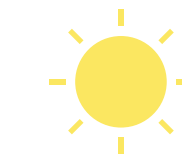

You can install and run any app on Beam's Android computer with 8 GB memory. Watch movies from Netflix or Youtube, or play games.

Beam. Follows your rules

Beam is a connected projector that can be programmed to automatically perform actions. You can program anything; play a movie when someone arrives home, leave a message, or display the weather every morning.
